

Basal insulins

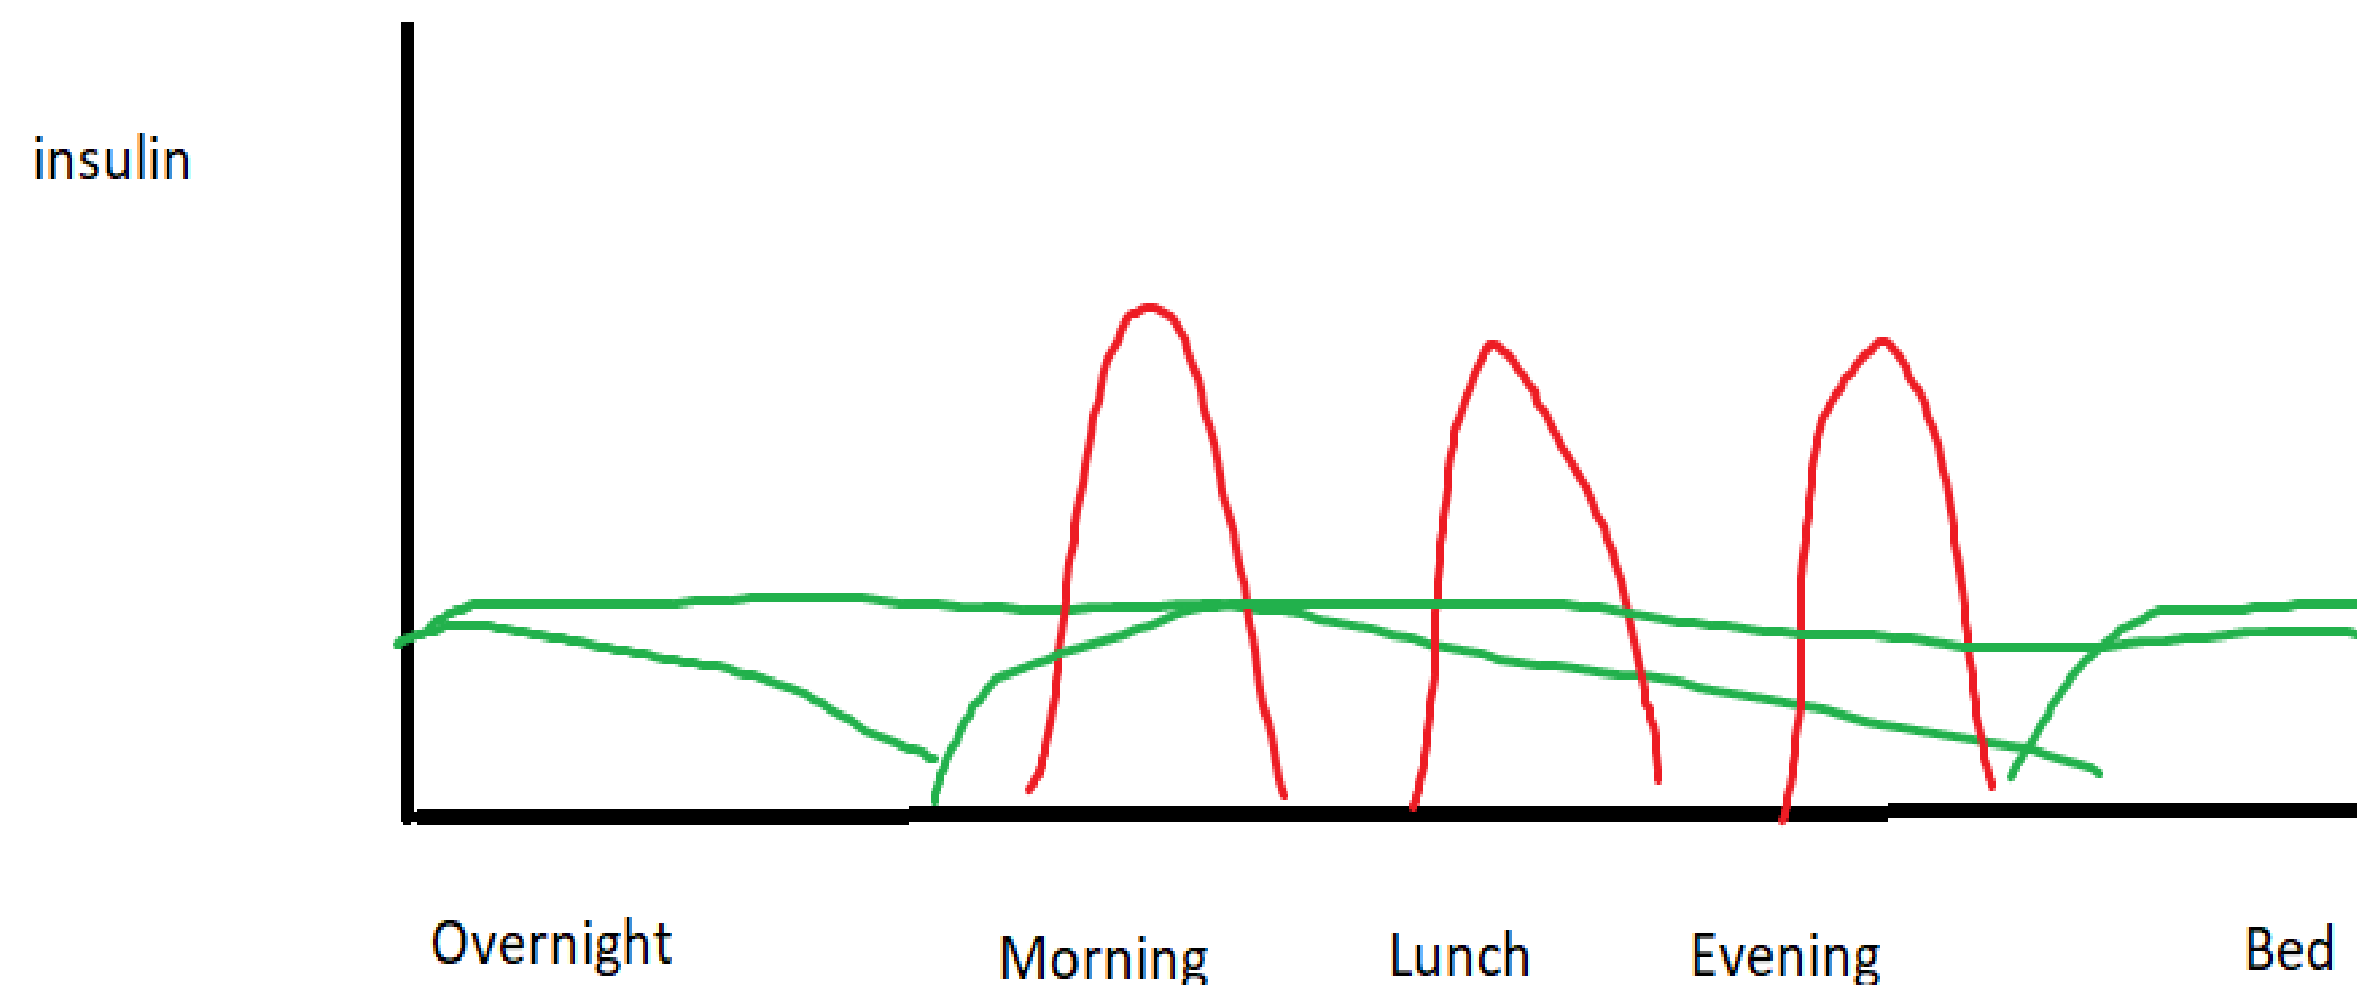

- The role of basal insulin (BI) is to keep glucose steady when not eating and to provide 24 hour coverage

- Usually ~50% of total daily dose

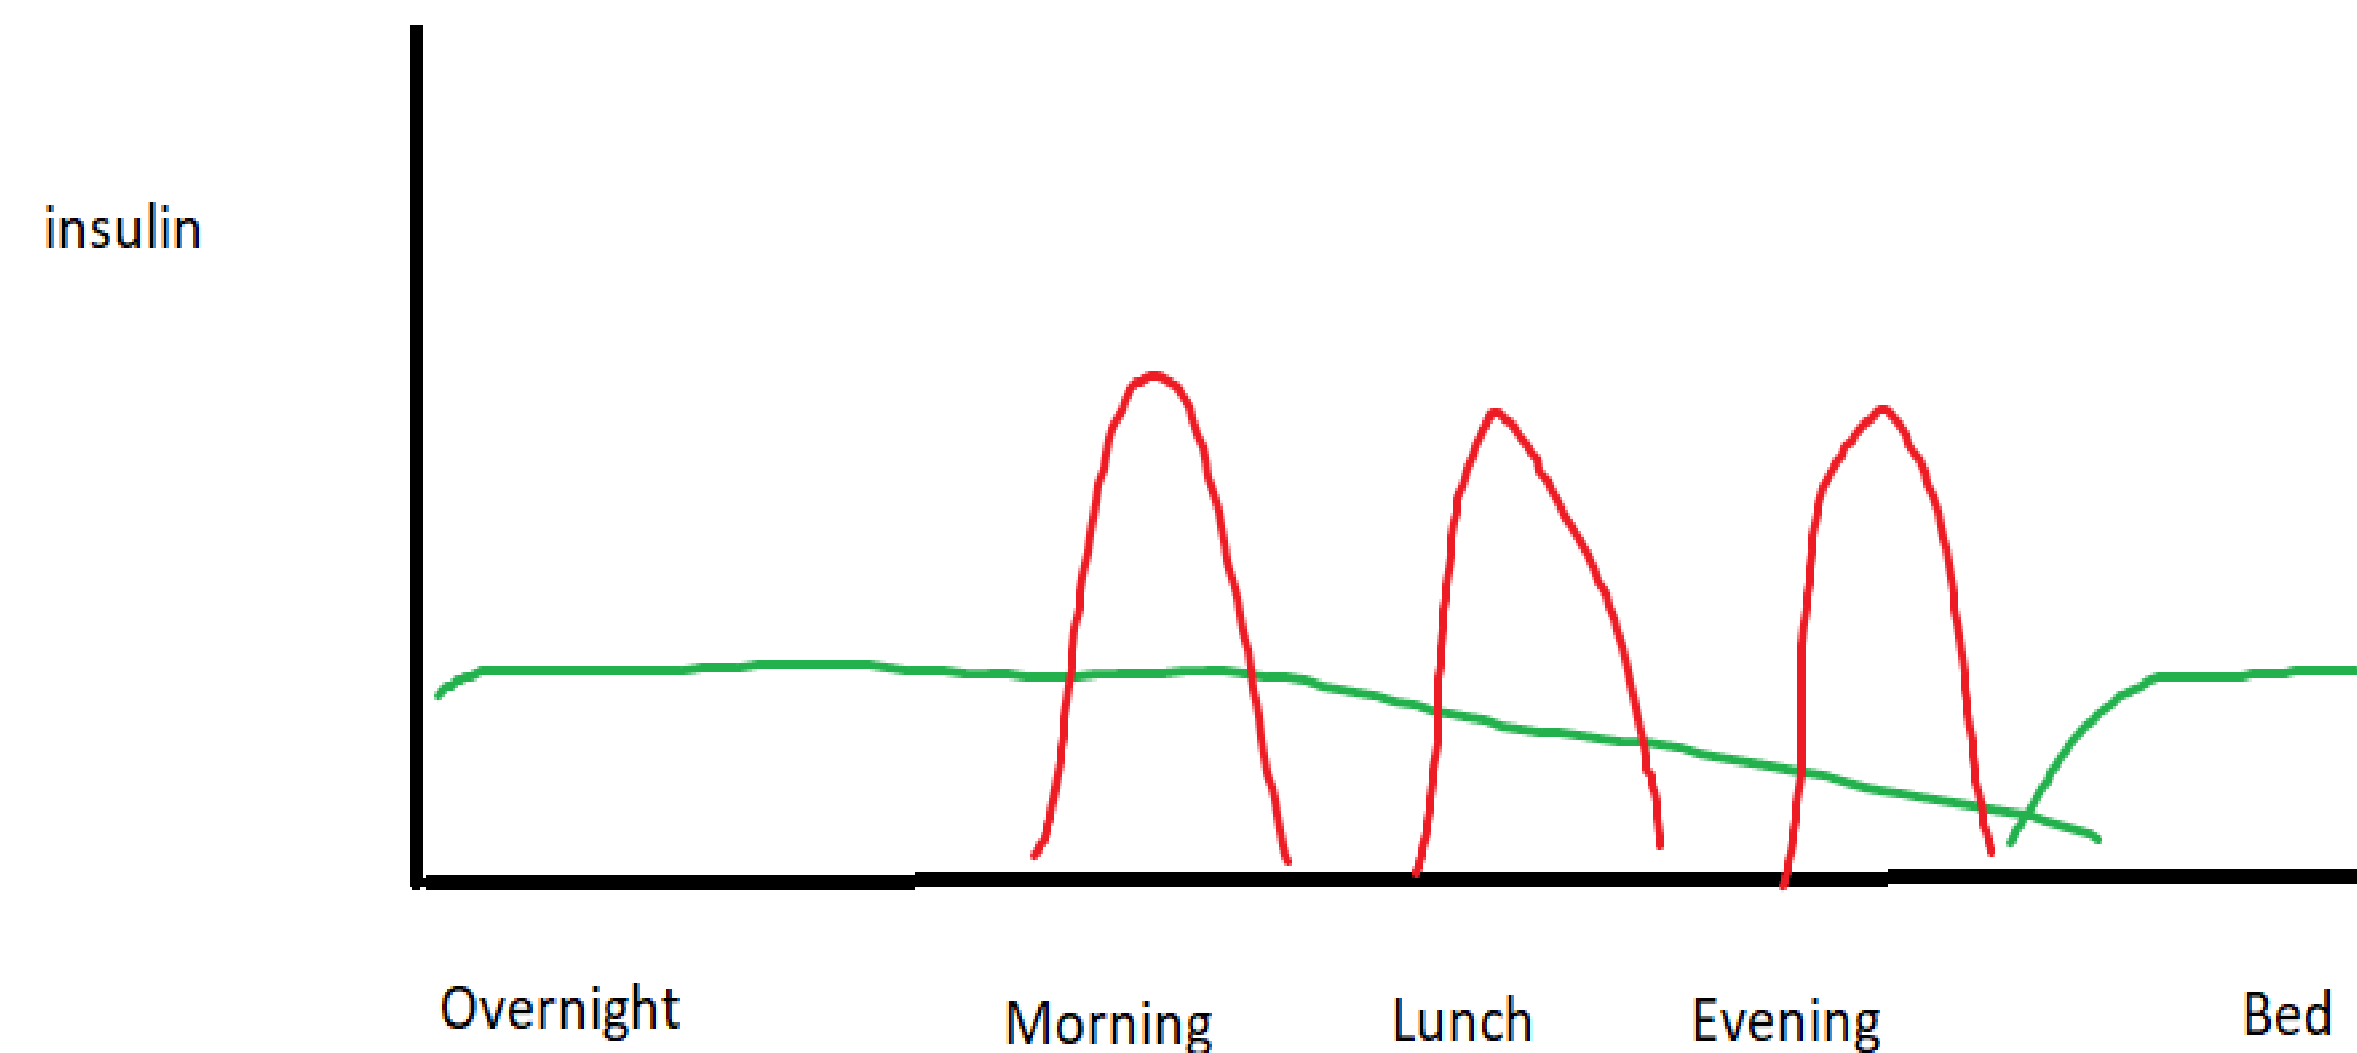

Basal insulins

Twice a day BI:

- Detemir (Levemir)

Once a day BI:

- Glargine (Lantus or Abasaglar)
- Glargine U300 (Toujeo)
- Degludec (Tresiba)

What would you do with the basal overnight?

Estimated A1c **7.8% or 62 mmol/mol**
